SLP/Dysphagia Note: Follow up & meal observation
Pt lying in bed, sat upright to eat. Pt alert and cooperative.
Pt responded to simple questions appropriately. Was
able to feed w/ minimal assistance. Pt expressed she
had too much on her tray. Writer removed all items
except 1 bowl ^{of purée} and 1 juice. Pt was then able to feed
herself. Meal observation revealed audible swallows
on all consistencies. Pt occasionally ^{x2} needed verbal
cues to swallow. Swallow ~~was~~ ^{seemed} effortful and mildly
uncoordinated. No post swallow coughing or vocal
changes. Plan: Follow up to ensure diet consistency
remains appropriate. Recommend (1) Continue
Pureed solids and nectar thick liquids (2) Continue
giving pills 1 at a time, crush larger pills, w/ apple
sauce or nectar thick fluids. (3) Limit number of
food choices on pt tray to 2-3 items, ^{at a time}
